Emergency Management Assistance Compact (EMAC) resources in California

The Emergency Management Assistance Compact (EMAC) is the Nation's mutual-aid system that provides a formal structure where all 50 States and 4 Territories have the ability to share resources across State boundaries. The Cal OES EMAC Coordinator in coordination with Cal OES Fire Branch are working together to request and coordinate needed resources via the EMAC Compact.

- The following states have EMAC resources in California:
 - Idaho: 5 engines
 - Montana: 5 engines
 - New Mexico: 5 engines
 - Washington: 15 engines
 - Utah: 10 engines
 - Texas: 25 engines

WEATHER OF CONCERN

Weather of Concern

- Air Quality Alerts issued for portions of California until wildfires are extinguished.
- Thunderstorms with Fire Weather and Flood concerns through Wednesday for portions of Northern California.
- By Wednesday and Thursday, the door will be open for monsoon moisture to seep into the Southern California region. This will lead to increasing chances for showers and storms primarily along and south of I-15. Storms could produce flash flooding, strong winds, and small hail.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

High Risk Far Eastside for late afternoon/evening dry thunderstorms today and Wednesday

Some chance of isolated dry thunderstorms Siskiyou/Modoc County areas (mostly NE) this evening into Wednesday

Northern California remains under a northward extension of the ever-present four corners low. There is also a low pressure trough just offshore that will become a player in our weather pattern a little later this week.

Some monsoon moisture has been creeping northward around the western edge of the high the past few days and will continue to move further north today. Enough afternoon and early evening instability is expected to be in place Wednesday for some isolated high-based/dry thunderstorms to develop, mainly along the NV border and possibly a little further westward toward the Cascades and northern Sierra. High Risk for significant fires has been designated for the Far Eastside today and Wednesday as a result. There is also an uncertain chance of isolated dry evening or overnight thunderstorms developing in Siskiyou and Modoc Counties. Any lightning strikes are likely to start new fires. One of the uncertainties of whether thunderstorms will be able to develop is the amount of dense smoke over the region that would limit daytime heating's contribution toward generating unstable conditions.

Outside so strong thunderstorm outflow winds that would spread fire rapidly, surface winds will follow their typical local summer diurnal patterns of gusty afternoon onshore winds in the west and generally gusty S to SW winds east of the Coast Range. Min afternoon relative humidity (RH) may be a slightly higher in some areas today and Wednesday, but values of 7-17% will still be possibly in the driest areas. Rather poor overnight RH recoveries will also continue.

Thursday and Friday a low pressure trough currently lingering off shore will move E across our northern areas and Southern OR. The high will dominate our weather pattern again later Friday into early next week with hot, dry conditions continuing to prevail.

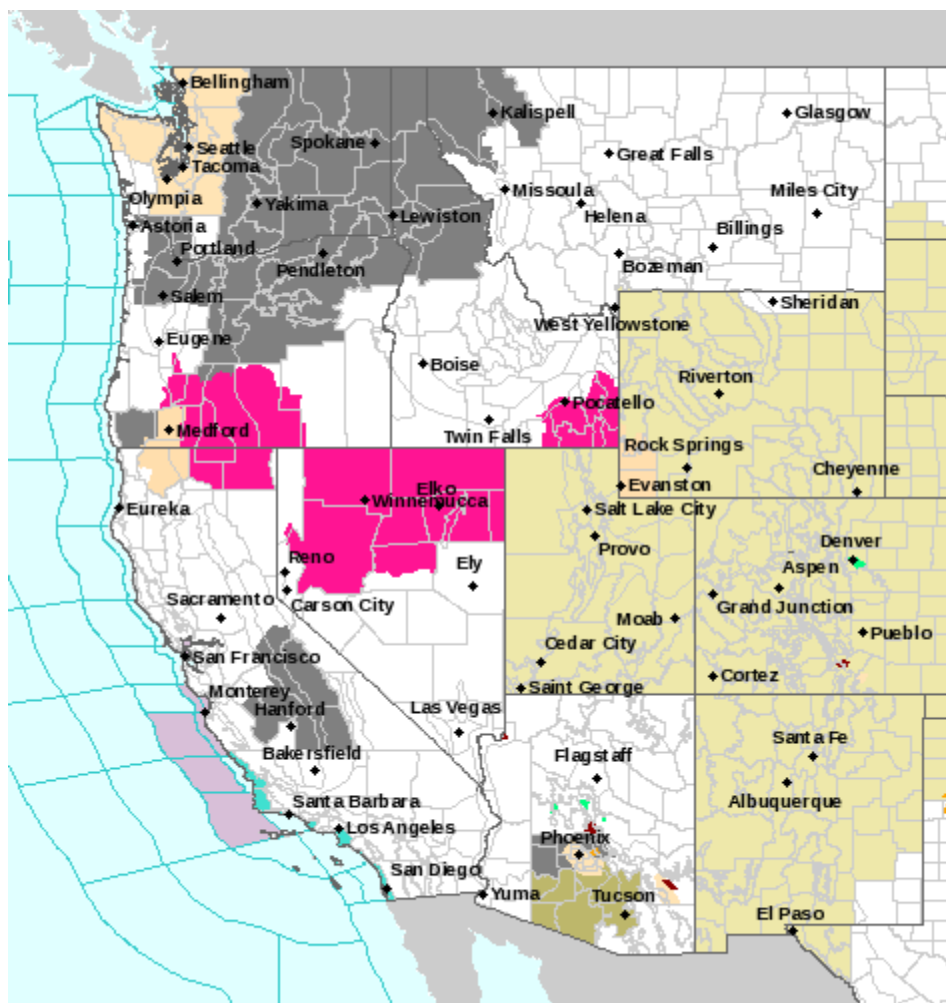

SOUTHERN CALIFORNIA

Scattered wet thunderstorms in the Sierras and the desert south of I-15.

Locally breezy through Thursday.

Expect temperatures to continue to hover a couple of degrees above normal through Wednesday with little day to day change in the overall weather picture. Highs will reach the 80s in the mountains to the 90s in the valleys. Scattered wet thunderstorms will be possible today in the higher elevations in the Sierras as well as much of the high desert. West winds of 20-30 mph will be possible in the Kern County Mountains and Antelope Valley. Similar northwesterly winds speeds will develop along the central coast during the afternoon hours. Minimum RH will trend higher over Southern California during the second half of the week as a weak surge of monsoonal moisture reaches the desert. There will likely be an increase in wet thunderstorms across Southern California with some convection possible in the Angeles, San Bernardino and Cleveland National Forests Wednesday through Friday. Temperatures will increase slightly during the second half of the week with highs climbing back to the 100-105 in the valleys and lower foothills. This weekend, the flow of moisture will be shut down and no thunderstorms are expected Saturday into the first part of next week. Minimum RH will trend lower over the weekend with little change in the temperatures expected during the following 5-7 days. Winds will be light beginning Friday.
